

## **STid wins at the Security Trophies 2016 with STid Mobile ID®!**

*Paris, 28 September 2016*

**A panel of 17 judges, including Security Directors from Airbus, EDF, Schneider Electric, Renault, IKEA, La Poste and Prosegur, as well as the presidents of professional organizations such as SVDI, CEFSI, FFMI, GPMSE and CDSE, chose STid and its STid Mobile ID® solution from 17 other entrants!**

The Security Trophies are an annual highlight in the security field. More than 1,000 professionals working in the sector attended the ceremony and discussed the issues facing the future of access control.

STid is a trailblazer and market leader in the design of high-security solutions. On Monday 26<sup>th</sup> September, STid Mobile ID® won the Smart Access Control category of France's *Trophées de la Sécurité* (Security Trophies), held at the Grand Théâtre de Paris. This solution is reinventing access control by installing access credentials on mobile devices such as smartphones, to complement or replace traditional RFID cards.

The company's abilities to develop intuitive, easy-to-use, secure and open solutions were the main factors behind this win. According to a member of the award panel, *"this solution is so easy to use, it takes the difficulty out of access control (...) it represents a real revolution in the access control field"*.

The user can now open a door by placing his or her hand close to the access control reader. *"This action initializes the communication with the smartphone which will grant the access, even if the device is in standby mode or in a phone call. It's quite simple, ergonomics and unencumbered"* explains Maé Tholoniât, Security Product Manager.

STid is also differentiated by its Offline and Online architectures for businesses, governments and industries which can manage autonomously and independently the security on their premises. *"The Online application makes it possible to transfer instantly and safely a virtual card to a remote user - visitor, new collaborator - on an Android phone or iPhone"* adds the Security Product Manager.

Vincent Dupart, the CEO of STid, concludes, *"our STid Mobile ID® solution leverages the benefits of smartphones to create a unique user experience based on intuitive and innovative identification methods that do not compromise user safety. This new award reflects our ability to keep on innovating and to design well suited solutions for users and Security Directors real needs."*

STid will officially launch STid Mobile ID® at the Expoprotection trade show, which runs from 7 to 9 November 2016 at Porte de Versailles in Paris. The entire team will be available to meet with clients and discuss its latest mobile access control solution.
