STid Secures Police of the University of Texas

The UTA police at has selected Architect Blue multi-technology readers — combining three identification technologies: 125 kHz, 13.56 MHz, and Bluetooth — and the STid Mobile ID solution in order to control access to its premises and facilitate technological migration to advanced security levels. This mobile solution reinvents access control by making identification much more instinctive and user-friendly. It brings the access card to your smartphone using innovative identification modes, in addition to the badge. "We analyzed the solutions available on the market. Ergonomics, a high level of security, and configuration tools that make it easy to implement the solution are the criteria that made STid stand out very quickly. More than 130 users, police officers, and security professionals use STid Mobile ID daily. It is essential for protecting the access to our infrastructures", says a UTA police chief sergeant.
