

Case study - French Bank

Professional Security Magazine Vol 26/1 - January 2016

French Bank

Banque Populaire Provençale et Corse (BPPC) sought head office access control.

The bank wanted a system consistent with brand image; and a single multi-application card, and central security management. Installed by Unicacces were Architect RFID card readers, UHF systems and dual frequency cards from French product manufacturer STid. Readers cover external, and internal ground floor, doors; elevators, access gates, and server and IT rooms. This range works with URC UHF readers, to control access to car parking. As the only visible part of the system, readers had to blend into the bright, modern building, matching BPPC colours. STid CEO, Vincent Dupart, says: “A key challenge for a company like BPPC is to manage diverse resources, security levels, and staff mobility. However, it must not neglect its image by installing readers that miss the bar in terms of aesthetics and security. The solutions that we offer can meet all current and future requirements.”
